

Case Study: Trine University

Using Rydin PermitExpress™ to go paperless and become more efficient.

The Problem:

Trine University needed help. Dealing with all the citations and appeals by hand was becoming too much to handle. The workers were struggling to read the handwriting, which was frustrating and only added to the excessive amount of time already spent on data entry.

The Solution:

In order to step away from the paper process, Trine University decided to contact us. They wanted to reduce the hours spent on data entry, yet still have the driver's information at their fingertips. Rydin PermitExpress™ parking management software was the solution Trine was looking for.

The Value:

- RPE saves 300+ hours of labor every year.
- With RPE, there is no time spent on lists or stuffing envelopes.
- Revenue has drastically increased since using RPE.
- They have a 100% success rate using only an online payment system.
- It created a reduction in workload/labor for student workers, officers, business office staff, and IT.

Testimonial:

“If there was one tool I would recommend to administrators who are involved with parking on a collegiate level, PermitExpress would be that tool. Of all the vendors we have worked with to run reports, PermitExpress gives you the most complete system. For ease of use and in total, everything engrained in PermitExpress fits that mold. You can rest assured parking management will be handled if PermitExpress is implemented on your campus. When I think of PermitExpress, ‘complete parking management’ comes to mind.”

-Victor Morrow, Associate Director of Campus Safety

Trine University is “extremely satisfied with the level of care and support.”
