# university of mobile

Case Study: University of Mobile

Using Rydin PermitExpress™ to skip the paper process and advance to an efficient technology sytem.

The Problem:

When the University of Mobile decided to revamp their parking management program, they wanted to avoid paper registration forms. Why not let the drivers keystroke their own information?

The Value:

- They were able to upgrade 20-30 year old technology in one year.
- RPE cut their workload in half.
- They can quickly and readily identify registered vehicles.

The Solution:

In order to increase their compliance with the new parking process, University of Mobile came to us for our parking software. Rydin PermitExpress™ was able to take their parking program from the "Stone Age to the Industrial Revolution".

Testimonial:

"One of my favorite things about RPE is the emailed citation to the driver, in addition to the ticket on the windshield. Also, the set up was great! Tom made the process a successful one and the guide he created has helped make the transition a smooth one. We wouldn't go back to the paper process for anything."

-Dave Sumner, Security Director

With Rydin PermitExpress™, University of Mobile was able to take their parking program from the "Stone Age to the Industrial Revolution".
