

Security Features

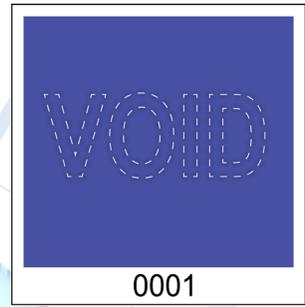

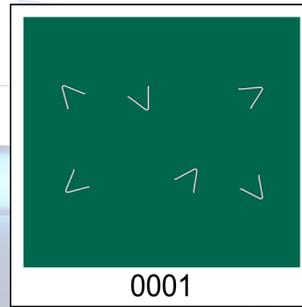

2025-2026

0001

Foil & Metallics

Use these in almost any part of your permit design: Logos, graphics, text, number boxes, and sequential numbering.

- **Foil Stamping:** Holographic and Metallic foils. Using the traditional methods to add elegance and security. Limited colors and patterns available.
- **Metallic BlastSM:** Holographic and Metallic foils. This is our updated method of adding foils to our products. Almost any color is available.
- **Secure & Valid Gold** and **Secure & Valid Silver** are both foild stamping options that are exclusive to Rydin and add an additional level of security to any design.

Security Slits

Security Slits are small die-cuts in the decal. When removed from the windshield, the slits help the decal to rip, shred, and tear. Two of the most popular patterns are Chevron or VOID.

Black Light Security Ink

An extra level of counterfeit protection - under normal light this ink is virtually invisible. Your message is revealed when exposed to a UV Black Light.

Laminations

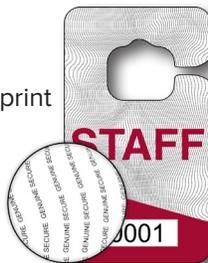

These are an extra layer of counterfeit protection.

- **PrismCal[®] Pattern:** This light diffracting, kaleidoscopic addition is eye-catching and impossible to counterfeit. It can be added to both hang tags and decals.

Scratch-Off Ink

Our Scratch-Off Hang Tags allow you to assign an expiration date at the time the permit is issued. If more than one date is exposed, the permit becomes invalid. Custom sizes are available and back print or instructions are optional features. These hang tags can also be used with a punch without the scratch-off ink.

As with all our products, we can customize your scratch-off permits to suit the needs of your organization.

Microprint

Using our microprint technology we can print text in a 1 point font. This is so small that if someone attempts to photocopy your permits the text will be distorted and blurred.
